## Circular Polarization Harness

The Maco Circular Polarization Harness is for users who wish to achieve circular polarization on their dual-polarity beams. The harness feeds both polarizations simultaneously.

The harness consists of 2 lengths of 75 ohm RG11 coax, 1 length of 50 ohm RG8 coax, hand-soldered PL-259 connectors, T connector, barrel connector, and silicone self-adhering tape. All connectors are high quality silver/Teflon.

The harness is perfect for Maco dual-polarity beams, Gizmotchy beams, Moonrakers, PDL IIs, and other beams that feature two coax connections.
